Subject: Comment on Case # 2024-00326

Dear Kentucky Public Service Commission,

When LGE&E-KU plans for future electricity needs, they should be proposing solutions that prioritize the wellbeing of customers instead of their own corporate interests. [REDACTED] LG&E/KU customers like me have struggled with paying our energy bills while our health is negatively affected by the air pollution from fossil fuel power plants.

Please encourage LG&E-KU to invest in energy efficiency and local distributed energy resources, like rooftop solar and advanced batteries. These options are cheaper in the long run and will help lower the overall demand for energy while helping keep energy affordable for us Kentuckians.

Sincerely,
Mr. Wallace Evans

Subject: Comment on Case # 2024-00326

Dear Kentucky Public Service Commission,

When LGE&E-KU plans for future electricity needs, they should be proposing solutions that prioritize the wellbeing of customers instead of their own corporate interests. [REDACTED] LG&E/KU customers like me have struggled with paying our energy bills while our health is negatively affected by the air pollution from fossil fuel power plants.

Gas plants face carbon policy threats during their 40-year life cycle, increasing the risk of stranded assets (customers being on the hook to pay for gas plants that are no longer useful = bad debt for customers).

Companies need to track need (energy burden), energy insecurity (arrearages and disconnections), and utility retrofits better -- and make that data publicly available. We need to lower pollution levels and threats of extreme temperatures and extreme weather events. The fossil fuels industry is causing these extremes to occur with alarming frequency, threatening our health, agriculture and economy.

Before 40 year gas plants are even considered we need to expand efficiency programs, rooftop solar, utility scale solar, storage, and fully explore new capacity

alternatives such as virtual power plants, joining regional grids. Kentuckians need Energy Efficiency programs that achieve at least 2-3% of load.

We want the companies to help customers invest in Energy Efficiency, solar and storage -- and access IRA benefits outside of company programs: this means better policy advocacy.

We encourage you to please invest in energy efficiency and local distributed energy resources, like rooftop solar and advanced batteries. These options are cheaper in the long run and will help lower the overall demand for energy while helping keep energy affordable for us Kentuckians.

Sincerely,

Mr. Brian McCall

Solar with batteries is a clear win for everyone and will be cheaper in the long run than another natural gas plant to run a bunch of datacenters. Tech companies are already pulling back on datacenter production, don't leave Kentuckians on the hook for new plants that will burn expensive fuel to support hypothetical data centers that

may not even be built

Sincerely,

Dear Kentucky Public Service Commission,

When LGE&E-KU plans for future electricity needs, they should be proposing solutions that prioritize the wellbeing of customers instead of their own corporate interests. [REDACTED] LG&E/KU customers like me have struggled with paying our energy bills while our health is negatively affected by the air pollution from fossil fuel power plants.

Please encourage LG&E-KU to invest in energy efficiency and local distributed energy resources, like rooftop solar and advanced batteries. These options are cheaper in the long run and will help lower the overall demand for energy while helping keep energy affordable for us Kentuckians.

Sincerely,
Ms. Katherine Noye

Dear Kentucky Public Service Commission,

As customers, we do need lower prices in a world, or rather, in America that will not strive to lower prices. I think thoughtful consideration for future generations and the health of our planet, we need to put forth more effort, and have an interest, in creatively engaging in innovative ways to foster renewable energy sources. This is possible if we are sincerely interested in the well being of all peoples. Thank-you.

Joyce Gooding

Dear Kentucky Public Service Commission,

When LGE&E-KU plans for future electricity needs, they should be proposing solutions that prioritize the individual and families that have increased expenses (for example, food) and earn less than livable wages. The social support systems are insufficient and are being further cut in funds and staff.

Please encourage LG&E-KU to invest in energy efficiency and local distributed energy resources, like rooftop solar and advanced batteries. These options are cheaper in the long run and will help lower the overall demand for energy while helping keep energy affordable for us Kentuckians.

I have greatly benefitted from the solar panels I bought for my roof and recently convinced our church congregation to purchase solar for our building. Thus I see how much of our solar energy is kept by KU. I know the electric companies benefit from the energy our solar panels send to you. It is as though you are taxing our church.

Sincerely,
Dr. Karen Janssen

Subject: Comment on Case # 2024-00326

Dear Kentucky Public Service Commission,

When LGE&E-KU plans for future electricity needs, they should be proposing solutions that prioritize the wellbeing of customers instead of their own corporate interests. [REDACTED] LG&E/KU customers like me have struggled with paying our energy bills while our health is negatively affected by the air pollution from fossil fuel power plants.

Please encourage LG&E-KU to invest in energy efficiency and local distributed energy resources, like rooftop solar and advanced batteries. These options are cheaper in the long run and will help lower the overall demand for energy while helping keep energy affordable for us Kentuckians.

The proposed plans by LG&E and KU will increase energy costs for customers up to \$12.85/month or more and limit the growth of renewable energy sources, while also investing in natural gas and coal-fired power plants. While these plans may offer some benefits in terms of reliability and affordability, they also raise concerns about

their long-term environmental impact.

These utility companies are proposing investments in new natural gas plants and have plans to retire some aging coal-fired units but replace them with new natural gas plants, which may not be the most environmentally friendly solutions. There are concerns that the utilities' plans do not adequately prioritize renewable energy sources and may limit the growth of distributed energy resources like rooftop solar, which could be cheaper and more beneficial for customers.

The reliance on natural gas and the continued use of coal-fired power plants may raise concerns about greenhouse gas emissions and their long-term environmental impact. Some argue that investing in energy efficiency programs and distributed energy resources like rooftop solar would be a more cost-effective and environmentally responsible approach to meeting Kentucky's energy needs.

Subject: Comment on Case # 2024-00326

Dear Kentucky Public Service Commission,

Speculative infrastructure development to serve data centers and AI services constrains Kentucky's future energy needs, shackling our energy future to the energy needs and types of demand for an industry that is new and disconnected to the needs and well-being of the people.

AI data centers cannot use the renewable and sustainable energy sources we should be shifting to. We are letting a prospective and aspirational tail wag the dog. This is not a vision. It is a set of handcuffs for our energy future.

When LGE&E-KU plans for future electricity needs, they should be proposing solutions that prioritize the well-being of customers instead of their own corporate interests. [REDACTED] LG&E/KU customers like me have struggled with paying our energy bills while our health is negatively affected by the air pollution from fossil fuel power plants.

Subject: Comment on Case # 2024-00326

Dear Kentucky Public Service Commission,

When LGE&E-KU plans for future electricity needs, they should be proposing solutions that prioritize the wellbeing of customers instead of their own corporate interests. [REDACTED] LG&E/KU customers like me have struggled with paying our energy bills while our health is negatively affected by the air pollution from fossil fuel power plants.

Please encourage LG&E-KU to invest in energy efficiency and local distributed energy resources, like rooftop solar and advanced batteries. These options are cheaper in the long run and will help lower the overall demand for energy while helping keep energy affordable for us Kentuckians.

Sincerely,
Ms. Frewoini Akcelom
[REDACTED] Louisville, KY 40208-1527

Subject: Comment on Case # 202400326

Dear Kentucky Public Service Commission,

Please read the following information. Think about the label “public utilities”. The word public is crucial. Public includes me and all of us. We need you to make sure that “Public Utilities” meet the needs of the public—not the corporations or their investors. Thank you.

When LGE&E-KU plans for future electricity needs, they should be proposing solutions that prioritize the wellbeing of customers instead of their own corporate interests. [SEP:SEP] LG&E/KU customers like me have struggled with paying our energy bills while our health is negatively affected by the air pollution from fossil fuel power plants.

Please encourage LG&E-KU to invest in energy efficiency and local distributed energy resources, like rooftop solar and advanced batteries. These options are cheaper in the long run and will help lower the overall demand for energy while helping keep energy affordable for us Kentuckians.

[REDACTED] LG&E/KU customers like me have struggled with paying our energy bills while our health is negatively affected by the air pollution from fossil fuel power plants.

I am opposed to building data centers. It isn't sustainable for AI to use the amount of energy that it does, and it will negatively impact our environment.

We need more focus on renewable energy as well, without passing costs on to consumers, as we are already paying ever increasing rates.

Please encourage LG&E-KU to invest in energy efficiency and local distributed energy resources, like rooftop solar and advanced batteries. These options are

cheaper in the long run and will help lower the overall demand for energy while helping keep energy affordable for us Kentuckians.

Sincerely,

Mrs. Susan Brown
