Comments:

I am *in favor* of the solar farm being built! I am a big proponent for clean and renewable energy initiatives. They should be used in conjunction with nonrenewable energy sources, rather than replacing entirely at this time. Someday, maybe we can switch fully to renewable energy, but the transition will take years. Also, I would rather have a solar farm as my neighbor than a big data center like other rural communities have. My biggest concern with a data center (as a neighbor) is the distribution of electric costs on us residents, not the data centers parent company. That is just unfair for companies to do that, make local residents pay for something they most likely aren't using! Anyway, my point is that I am in favor of cleaner energy initiatives. I am exploring getting solar panels at my property for my personal use. I think it would be extremely beneficial for our local community to give solar panels a try!
