Comments: I'm going to list a few of many of my concerns on Exie solar project. There have been many more questions than answers. How can solar panels/transmission lines be put so close to my neighborhood? Being the state recommended 2000' and Exie solar is doing 200' from my house not property line. This project is surrounding my home and neighborhood. These solar farms are being placed on prime agricultural farms with streams and creeks going through this project. Many of these farms was in CRP for water filtration for the creeks and the wildlife habitat to thrive. Which had to meet certain requirements to eligible so creeks and rivers could benefit from the water runoff. Doesn't make any sense to have CRP in for years and now we're ruining the habit by

forcing them off and putting solar panels that contain toxic heavy metals cadmium and hormone disrupters phalates. Cadmium is a known cancer causing chemical. This is a large project which is 1300-1800 acres you know there will be damages in shipping, installation, storms that produce hail or deterioration of age. The question is not if they will leak but when. Which goes back to the land and water. These chemical agents will go in the ground and in our water supply to all wildlife, domestic live stock and even our drinking water. Greasy creeks runs through a large portion of this project. Greasy creeks runs into Little Barren river then empties into Green river where many residents in and out of the county gets our drinking water and then flow on down through Mammoth Cave National Park. This will ruin our water supply and prime agricultural farm land forever. You can live without many things but 2 things you can't live without is clean water and clean agricultural land. These solar companies are already trying to get other farms all over Green County as well as surrounding counties. Also Exie Solar LLC filed an application at the PSC using my personal home address. I'm very upset about this.

Thanks, Brian Ervin
