Re: Kentucky Power Rate Hike (Case Number 2025-00257)

To Whom It May Concern:

Persons on fixed income like my father and myself and those working just making it from pay check to pay check CAN NOT afford an increase in our electric bills. We are not getting increase or raises in our income, we are making cuts + doing without to pay basic bill + one being electric.

Kentucky Power got an increase last year. Why should they get one this year (Spring 2026). They need to do like their customers. Fix the waste

that is in the Company, if we have to do it so should they.

I don't even know how they know what my meter reads cause it been here for years and I can't tell you the last time I've seen anyone from the electric company out here to my home).

It going to come to where people are going to shut off their electric and go to using generator or solar power or simply do without.

Bottom line is the elderly & blue collar workers can not afford an hike in their electric Bill.

Please do not let this hike go through.

Sincerely
The Daltons
