

KAW's construction practices are neither unreasonable nor inadequate as evidenced by the fact that two of the projects listed in the Complaint are complete; two are nearing completion and will be finished in a matter of days; and KAW's work on the final project is complete, as is LFUCG's sewer work. KAW is merely awaiting a final cost-sharing accounting from LFUCG for paving and restoration for that project. The following table sets forth the status of the work on the five projects mentioned in the Complaint in paragraph 17 and Appendix A.

Complete and LFUCG Informed of Status	Expected Completion 9/11/2026	KAW Work Complete Awaiting LFUCG Cost Share for Repaving
Bell Court Neighborhood (<i>LFUCG informed 8/5/25</i>)	Fontaine Road Neighborhood	Corral Street Neighborhood (<i>LFUCG informed of two streets 10/7/25 and 6/17/26, see below</i>)
South Upper Street Neighborhood (<i>LFUCG informed 7/30/26</i>)	North Limestone Neighborhood	

Further, in Answer to the matters complained of, KAW states the following:

1. KAW admits the allegations made in paragraphs 1-7 on pages 2 and 3 of the Complaint. KAW provides water service in the areas described by LFUCG. KAW occupies the rights-of-way in Fayette County pursuant to a franchise agreement; and KAW frequently enters LFUCG's rights-of-way to repair or replace water mains and other KAW structures.

2. KAW denies the allegations made in paragraphs 8-12 on pages 3 and 4 of the Complaint. KAW and its contractors have planned and executed water main replacement and repair projects in Fayette County in a professional and reasonable manner during the past two years. KAW and its contractors comply with Section 17C-24, Patching and Restoration standards, and make every reasonable effort to avoid construction and restoration delays.

3. KAW denies the allegation set forth in paragraph 13 on page 5 of the Complaint. KAW's contractors comply with the provisions of the *Kentucky Underground Facilities Damage Prevention Act* as codified in KRS 367.4901 through 367.4917. KAW's contractors use nonintrusive excavation techniques in the marked locations of other underground facilities, including LFUCG's sewer facilities and underground utility infrastructure operated by other public utilities. Despite everyone's best efforts, damage to underground facilities does occasionally occur. In the event of damage to LFUCG's sewer facilities during the course of a KAW main replacement or repair, KAW or its contractor contacts LFUCG immediately to report the damage and notifies Kentucky 811. Depending on the cause of the damage, any KAW contractor who damages underground facilities owned by LFUCG or other public utilities may be responsible for paying the cost of repairing the damaged facilities.

4. KAW denies the allegations set forth in paragraph 14 on page 5 of the Complaint.

5. KAW denies the allegations set forth in paragraphs 15 and 16 on page 5 of the Complaint. On **April 22, 2026**, KAW received notification from one of its contractors that the contractor was ceasing all operations and going out of business. The **same day** it received this notification, KAW identified another contractor to assume the work in the Fontaine Road Neighborhood. The replacement contractor was on site on **April 22, 2026** to assess the job. **Within three hours** of receiving notification from its contractor that the contractor was ceasing operations, KAW secured another contractor to assume responsibility for the Fontaine Road Neighborhood project; the contractor was on site; and KAW **informed LFUCG officials** that a different contractor would be assuming responsibility for the project.

6. The replacement contractor worked the week of May 4, 2026 to transfer materials from the defaulted contractor to it so that it could resume work in the Fontaine Road

Neighborhood which it did the week of May 11. During that week, **after receiving the required new permits** from LFUCG, the replacement contractor resumed water line work in the area.

7. Contractors that accept contracts to perform KAW main replacements and other KAW construction projects accept the construction timelines and project deadlines associated with the project. Many contractors working on KAW projects are working on more than one KAW project simultaneously. In those instances, it is the contractor's responsibility to allocate its workforce to timely complete all KAW projects. KAW does not direct its contractors to cease work on one ongoing project in order to move them to another ongoing project. As an independent contractor, it is up to the contractor to allocate sufficient resources so that all projects progress in a timely fashion. In deciding which resources to deploy in any given area, KAW's contractors consider many factors including project timelines, whether required permits have been issued, the availability of necessary materials and equipment, and the demands and limitations imposed by uncontrollable factors such as weather.

8. KAW denies the allegations contained in paragraph 17 on page 5 of the Complaint.¹ KAW's construction practices are neither unreasonable nor inadequate. KAW provides the following details concerning the projects mentioned in that allegation:

- a. North Limestone Neighborhood.** This project was quite large and involved 20 cross streets and numerous customer connections. The water main was placed in service on **December 30, 2025**. All customer connections have been made, and restoration work is nearing completion. KAW anticipates returning the project to LFUCG on **September 11, 2026**.

¹ These are the same projects described in Appendix A.

- b. Fontaine Road Neighborhood.** This water main replacement project began in the summer of 2025. All customer connections have been made, and restoration work is nearing completion. KAW anticipates returning the project to LFUCG on **September 11, 2026**. From the time the project began in 2025, KAW anticipated the project would be complete during the calendar year of 2026. When restoration took slightly longer than expected, KAW prepared a second fact sheet setting forth the details of the project and its expected completion date. This fact sheet was distributed in the neighborhood by KAW's contractor on the morning of **August 5, 2026**. This fact sheet is attached as the last document in **Attachment 1**.
- c. South Upper Street Neighborhood.** This project, which involved replacing water mains on certain Lexington streets that serve the University of Kentucky's campus, began in late summer 2025. Officials with the university were made aware of the project before work commenced. At the request of the University of Kentucky, KAW's contractors did not perform any work on this project during the university's "move-in week" of August 17 -20, 2025. KAW is aware of an accident involving a bicyclist in the project area. It is KAW's understanding that its contractor or the contractor's insurance provider resolved the cyclist's claim. Service connections for all KAW customers in the project area and restoration work were complete as of **May 20, 2026**.
- d. Bell Court Neighborhood.** This project, which involved replacing the water mains serving one of Lexington's oldest neighborhoods, is complete, and all restoration work has been finished. There was a period of inactivity in the Bell Court area from approximately August 5, 2025 until early November 2025, because

KAW considered the project complete and was unaware that LFUCG was holding the permits open. When KAW became aware that the permits were still open, it took immediate action to identify what items LFUCG felt should be addressed.

The water mains along Russell Avenue, East Bell Court, West Bell Court, and Sayre Avenue were placed in service on May 20, 2024, and KAW considered all service connection and restoration work finished and the project on those streets complete as of September 1, 2024. The water mains along Bell Court, Bell Place, Boonesboro Avenue, and Delmar Avenue were placed in service on June 18, 2024, and KAW considered all service connection and restoration work finished and the project on those streets **complete as of August 5, 2025**. The water mains along Forest Avenue, Skain Street, and Indiana Avenue were placed in service on June 28, 2024. KAW considered all service connection and restoration work finished and the project on those streets **complete as of August 5, 2025**.

KAW's Construction Manager **did not** learn that the permits for the project were still open and that LFUCG was continuing to assess fees until **November 2025**. At that time KAW requested a list of items to be addressed. LFUCG's engineer did not provide a written list, but did walk the area with KAW to point out restoration items that LFUCG believed required additional work. KAW's contractor addressed all of the issues identified by LFUCG and on **April 14, 2026** KAW informed LFUCG that the work was complete.

- e. **Corral Street Neighborhood.** This water main replacement project involves cost-sharing with LFUCG for paving and restoration work on certain streets because LFUCG conducted sewer work in the same area that KAW replaced water

mains. In instances like this, LFUCG and KAW share the cost of restoring streets.

Below is a summary of the status of work in the Corral Street Neighborhood:

- Warnock Street – The water main was placed in service on August 19, 2025, and all service connection and restoration work was **complete as of June 17, 2026**.
- Hawkins Avenue – The water main was placed in service on September 2, 2025, and all service connection and restoration work was **complete as of October 7, 2025**.
- Wilgus Avenue – The water main was placed in service on September 19, 2025. The service connection work is finished. LFUCG has completed sewer work and is finishing restoration work at this time. KAW is awaiting a final cost-share calculation from LFUCG for the restoration work.
- Race Street – The water main was placed in service on August 1, 2025. The service connection work is finished. LFUCG has completed sewer work and is finishing restoration work at this time. KAW is awaiting a final cost-share calculation from LFUCG for the restoration work.
- East 5th Street - The water main was placed in service on September 8, 2025. The service connection work is finished. LFUCG has completed sewer work and is finishing restoration work at this time. KAW is awaiting a final cost-share calculation from LFUCG for the restoration work.
- Corral Street - The water main was placed in service on November 1, 2025. The service connection work is finished. LFUCG has completed sewer work

and is finishing restoration work at this time. KAW is awaiting a final cost-share calculation from LFUCG for the restoration work.

9. KAW denies the allegation set forth in paragraph 18 on page 5 of the Complaint. Prior to beginning work on any construction project in Fayette County, KAW produces a one-page fact sheet about the project and provides the fact sheet to its contractor(s) with instructions that the fact sheet be distributed to all residents along the project route. Additionally, KAW contacts the LFUCG Council member(s) in whose district(s) where a particular construction project is located and makes them aware of the project. KAW also engages with neighborhood associations in the areas where it conducts projects. Prior to beginning construction in the Fontaine Road and Bell Court Neighborhoods, KAW participated in neighborhood association meetings and frequently responded to inquiries from the neighborhood associations regarding main replacement and restoration work. Attached to this response as **Attachment 1** are fact sheets for Fayette County projects.

10. The University of Kentucky is a resident of the South Upper Street Neighborhood. As can be seen from the Minutes of a pre-construction meeting that took place on **July 30, 2025**, KAW informed officials at the University of Kentucky about the water main replacement project in the South Upper Street Neighborhood before the project commenced. The minutes from the pre-construction meeting are attached to this response as **Attachment 2**.

11. KAW denies the allegations set forth in paragraph 19 on page 5 of the Complaint, both as to its construction practices and its communication with LFUCG.

12. KAW denies the allegations set forth in paragraph 20 on page 6 of the Complaint regarding unreasonable and inadequate construction practices

13. KAW denies the allegations set forth in paragraph 21 on page 6 of the Complaint. KAW invests in main replacement to ensure continued water quality, reliability, and adequacy of service. KAW is not under any directive to replace any specific water mains by a particular date. Additionally, when delays occur, they typically occur during the paving and surface restoration stage of a project not during the water main replacement or service connection stages. The paving and surface restoration construction stages have no bearing on the purity, pressure or quantity of water that KAW provides.

14. KAW admits the allegations in paragraphs 22 and 23 on page 6 of the Complaint. KAW is proposing a System Improvement Program (“SIP”) in its pending rate case, Case No. 2026-00094.² Water main replacement figures prominently in the proposal.

15. KAW denies the allegations set forth in paragraphs 24 and 25 on page 7 of the Complaint. Any allegation regarding events that **have not yet occurred**, such as the manner in which main replacement *could be* conducted in the future as part of the proposed SIP, is not suitable for inclusion in a formal complaint. Commission regulation 807 KAR 5:001, Section 20(1)(c) provides that a formal complaint must state an act or omission on the part of the utility. Speculation concerning future acts or omissions that have not yet occurred is not an appropriate subject for a formal complaint.

16. KAW denies the allegations contained in paragraphs 26 and 27 on page 7 of the Complaint. KAW possesses sufficient resources to provide adequate, efficient, and reasonable service in **all** areas in which it operates. KAW’s construction practices are not unreasonable or inadequate, and KAW is not unreasonably exercising its franchise in Fayette County.

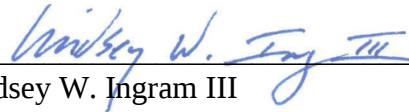

² *Electronic Application of Kentucky-American Water Company for an Adjustment of Rates, Approval of System Improvement Program, and Tariff Changes*, Case No. 2026-00094, (filed May 15, 2026).

17. As to the allegations set forth in paragraphs 28-31 on page 8 of the Complaint, KAW admits that its construction practices, insofar as those construction practices relate to providing potable water service to and for the public, are a “service” over which the Commission has jurisdiction. However, KAW denies that its construction practices are in any way unreasonable or inadequate. Further, KAW denies that its construction practices have resulted in unreasonable rates.

18. As demonstrated by the facts described above, there is no reason for the Commission to initiate a management and operational audit of KAW.

WHEREFORE, on the basis of the foregoing, KAW moves the Commission for an Order finding that this Complaint has been satisfied. In the alternative, KAW seeks an Order finding that electronic filing procedures will be utilized in all future filings made in this proceeding.

Respectfully submitted,

Lindsey W. Ingram III

BE SAFE. SLOW DOWN IN WORK ZONES.

Your safety, as well as the safety of your neighbors and our workers, is important to us. We work hard to keep our job sites safe, and we appreciate your efforts to slow down when driving near the construction area and using caution around the construction site. We also ask that you not approach crew members while they are using equipment, conducting traffic control or tending to other tasks on site that require their full attention.

PROJECT CONTRACTOR

QUESTIONS?

Erik Hall
Construction Project Manager
859-537-0878

WE'LL BE WORKING IN YOUR AREA SOON

Kentucky American Water will soon be upgrading the underground water main in your area as part of our ongoing efforts to provide quality, reliable water service.

Project Schedule

We anticipate starting this project in

Our contractor will work as efficiently as possible, but this project is likely to take several months to complete. Due to the nature of the work, there will be times when there is a break in the process and the contractor may vacate the area temporarily. Please know the project is still proceeding at these times.

Location and Time of Work

Our work will occur mostly in the street but could extend past the curbs and possibly disturb sidewalks and/or driveway entrances. Driveway accessibility will be maintained as much as possible and coordinated with property owners.

Generally crews plan to work on this project Monday through Friday during the following times:

(This is subject to change based on weather and other factors.)

Traffic Impacts

All traffic control will be conducted in compliance with local requirements. Motorists should use caution, obey traffic signs and flaggers, and follow any detour routes – should there be any – when in or near the work zone. There could be temporary traffic restrictions or delays at times during working hours, but we will work to minimize disruptions as much as possible.

Site Maintenance

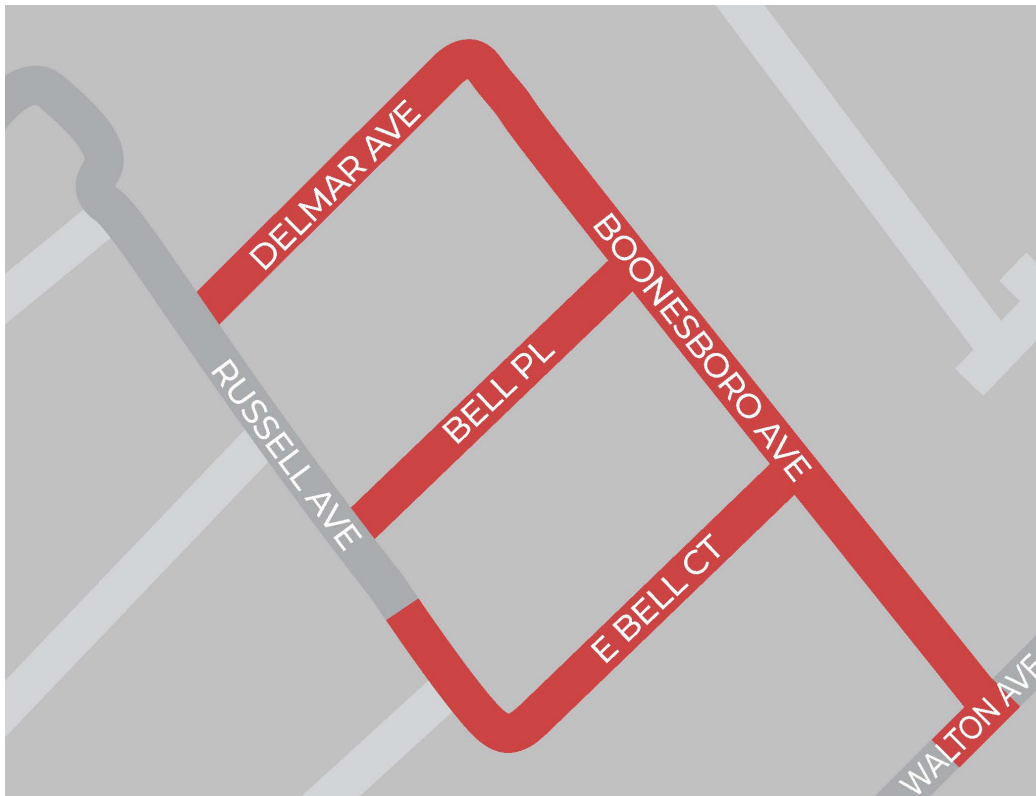

We will work hard to keep the construction area well-maintained and our contractors will tidy up further each day before completing work.

Noise

As with any construction project, some noise will be unavoidable with this project. We apologize for any inconvenience and appreciate your understanding and cooperation.

Continued on the back ➡

Project Area

Project Overview

1. Before construction begins, existing waterlines and other underground utilities in the area will be marked with colored flags and temporary paint.
2. The new water main installation will include installing the new pipe, testing it and placing it into service. While we interconnect the new main to the water distribution system, you may experience a temporary water service interruption. You may also experience a slight discoloration of water. If this happens, run your cold water tap until the water clears.
3. Once the water main is installed, we'll return to the area to connect customers' individual service lines to the new main. This may involve replacing utility-owned service lines that connect the new main to each property. This process may also involve a temporary interruption in water service. We'll attempt to notify you of this process 24 hours in advance. We'll also notify you on the day the service line is replaced with instructions on how to flush your household plumbing prior to using water. If you're not home, we will leave these instructions at your front door.
4. We will install temporary paving material (cold patch asphalt) after the above steps are complete.
5. Once we receive final guidance from local authorities on how final paving should be conducted, and as weather permits, we will move forward with final paving and any other restoration of concrete, grass and landscaping.

Cleanup and Restoration

We will restore all areas that were disturbed. Due to the various steps in the process, there may be delays in full restoration of pavement and grass at times due to weather conditions, access to asphalt and/or the need to let the ground settle, for example.

The paving process includes multiple steps, to include working in cooperation with local authorities to identify which portions of the roadway require new pavement, receiving necessary permits to begin work in the roadway, and having favorable weather conditions to allow asphalt to cure properly.

BE SAFE. SLOW DOWN IN WORK ZONES.

Your safety, as well as the safety of your neighbors and our workers, is important to us. We work hard to keep our job sites safe, and we appreciate your efforts to slow down when driving near the construction area and using caution around the construction site. We also ask that you not approach crew members while they are using equipment, conducting traffic control or tending to other tasks on site that require their full attention.

1. Before construction begins, existing waterlines and other underground utilities in the area will be marked with colored flags and temporary paint.
2. The new water main installation will include installing the new pipe, testing it and placing it into service. While we interconnect the new main to the water distribution system, you may experience a temporary water service interruption. You may also experience a slight discoloration of water. If this happens, run your cold water tap until the water clears.
3. Once the water main is installed, we'll return to the area to connect customers' individual service lines to the new main. This may involve replacing utility-owned service lines that connect the new main to each property. This process may also involve a temporary interruption in water service. We'll attempt to notify you of this process 24 hours in advance. We'll also notify you on the day the service line is replaced with instructions on how to flush your household plumbing prior to using water. If you're not home, we will leave these instructions at your front door.
4. We will install temporary paving material (cold patch asphalt) after the above steps are complete.
5. Once we receive final guidance from local authorities on how final paving should be conducted, and as weather permits, we will move forward with final paving and any other restoration of concrete, grass and landscaping.

Cleanup and Restoration

We will restore all areas that were disturbed. Due to the various steps in the process, there may be delays in full restoration of pavement and grass at times due to weather conditions, access to asphalt and/or the need to let the ground settle, for example.

The paving process includes multiple steps, to include working in cooperation with local authorities to identify which portions of the roadway require new pavement, receiving necessary permits to begin work in the roadway, and having favorable weather conditions to allow asphalt to cure properly.

BE SAFE. SLOW DOWN IN WORK ZONES.

Your safety, as well as the safety of your neighbors and our workers, is important to us. We work hard to keep our job sites safe, and we appreciate your efforts to slow down when driving near the construction area and using caution around the construction site. We also ask that you not approach crew members while they are using equipment, conducting traffic control or tending to other tasks on site that require their full attention.

WE'LL BE WORKING IN YOUR AREA SOON

S. Upper Street
Lexington

Kentucky American Water will soon be upgrading the underground water main in your area as part of our ongoing efforts to provide quality, reliable water service.

Project Schedule

We anticipate starting this project in August 2025

Our contractor will work as efficiently as possible, but this project is likely to take several months to complete. Due to the nature of the work, there will be times when there is a break in the process and the contractor may vacate the area temporarily. Please know the project is still proceeding at these times.

Location and Time of Work

Our work will occur mostly in the street but could extend past the curbs and possibly disturb sidewalks and/or driveway entrances. Driveway accessibility will be maintained as much as possible and coordinated with property owners.

Generally crews plan to work on this project Monday through Friday during the following times:

7 pm to 6 am

(This is subject to change based on weather and other factors.)

Traffic Impacts

All traffic control will be conducted in compliance with local requirements. Motorists should use caution, obey traffic signs and flaggers, and follow any detour routes – should there be any – when in or near the work zone. There could be temporary traffic restrictions or delays at times during working hours, but we will work to minimize disruptions as much as possible.

Site Maintenance

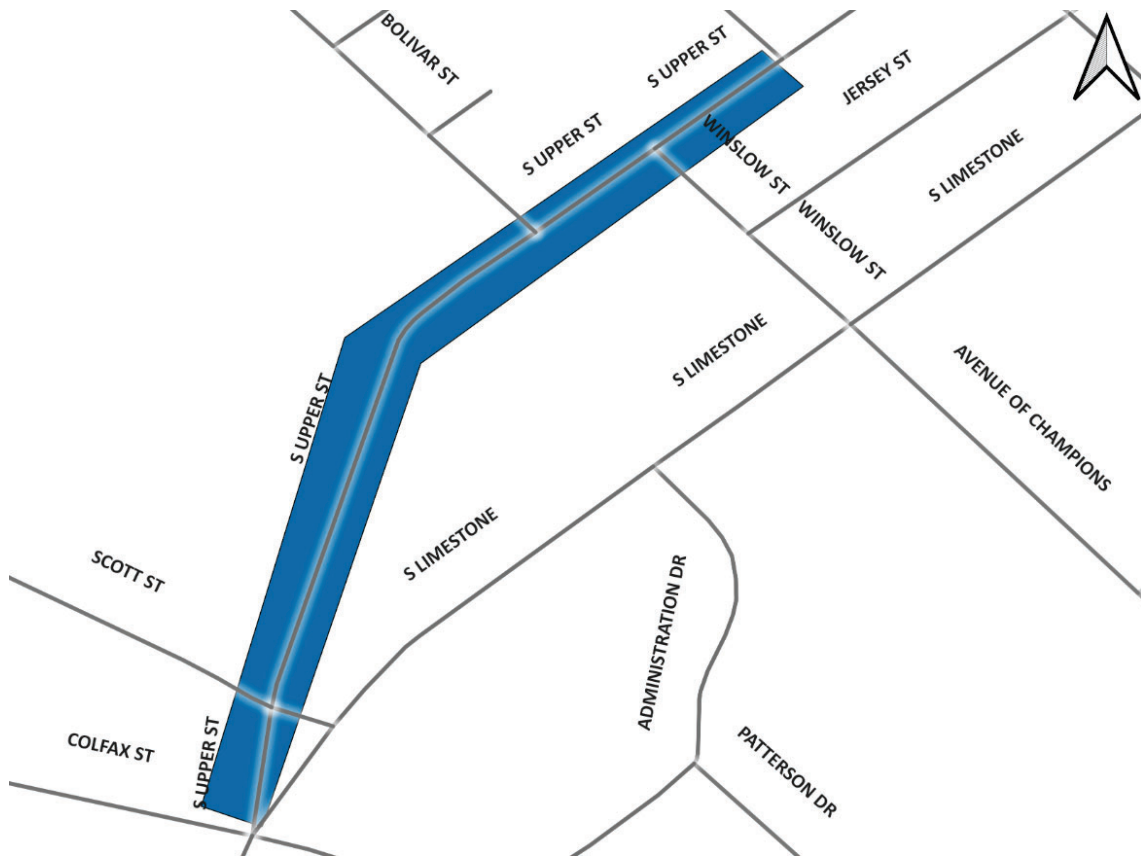

We will work hard to keep the construction area well-maintained and our contractors will tidy up further each day before completing work.

Noise

As with any construction project, some noise will be unavoidable with this project. We apologize for any inconvenience and appreciate your understanding and cooperation.

Project Area

Project Overview

1. Before construction begins, existing waterlines and other underground utilities in the area will be marked with colored flags and temporary paint.
2. The new water main installation will include installing the new pipe, testing it and placing it into service. While we interconnect the new main to the water distribution system, you may experience a temporary water service interruption. You may also experience a slight discoloration of water. If this happens, run your cold water tap until the water clears.
3. Once the water main is installed, we'll return to the area to connect customers' individual service lines to the new main. This may involve replacing utility-owned service lines that connect the new main to each property. This process may also involve a temporary interruption in water service. We'll attempt to notify you of this process 24 hours in advance. We'll also notify you on the day the service line is replaced with instructions on how to flush your household plumbing prior to using water. If you're not home, we will leave these instructions at your front door.
4. We will install temporary paving material (cold patch asphalt) after the above steps are complete.
5. Once we receive final guidance from local authorities on how final paving should be conducted, and as weather permits, we will move forward with final paving and any other restoration of concrete, grass and landscaping.

Cleanup and Restoration

We will restore all areas that were disturbed. Due to the various steps in the process, there may be delays in full restoration of pavement and grass at times due to weather conditions, access to asphalt and/or the need to let the ground settle, for example.

The paving process includes multiple steps, to include working in cooperation with local authorities to identify which portions of the roadway require new pavement, receiving necessary permits to begin work in the roadway, and having favorable weather conditions to allow asphalt to cure properly.

BE SAFE. SLOW DOWN IN WORK ZONES.

Your safety—and the safety of our crews—is important to us! We work hard to keep our job sites safe, and we appreciate your effort to slow down, stay alert and use caution around the construction site. Remember to follow state and local Move Over laws.

FONTAINE ROAD PROJECT UPDATE

Kentucky American Water is committed to providing safe, clean, reliable and affordable water service. We're working diligently to complete the water main improvement project on Fontaine Road and Euclid Avenue. This project has been coordinated with Lexington-Fayette Urban County Government (LFUCG). All work schedules have been conducted in accordance with approved permits. Following is an update on the work completed and what to expect next.

What's Completed or Underway

- More than 4,000 feet of aging water main has been replaced along Fontaine Road and Euclid Avenue.
- 107 water service lines and eight fire hydrants have been replaced.
- Two water service line and three fire service line installations remain.
- We're in the process of interconnecting the new main to the distribution system.

We anticipate completing this work by August 21.

Any questions can be directed to Corey Allender at 859-321-6758 or Erik Hall at 859-537-0878.

What's Next - Site Restoration

- Our contractor is currently performing concrete work in the roadway as well as restoring impacted curbs and sidewalks. They will also perform repairs and reseeded of disturbed grassy areas. We anticipate this work will be completed by the **end of September**. If you have questions, contact Corey or Erik at the phone numbers above.
- **Once the above work is completed, final paving will be scheduled and completed by the Lexington-Fayette Urban County Government's paving contractor. Questions related to final paving can be directed to LFUCG.**

We appreciate your patience and understanding while we complete this important improvement project.

Kentucky-American Water
Pre-Construction Meeting Minutes
South Upper Street Neighborhood Project

Pre-Construction Meeting

July 30, 2025 9:00 a.m.

PROJECT: S. Upper QIP Main Replacement

DESIGN: Stantec

- Jacob Crouch, Jason Maxwell

CONTRACTOR: Stateline

- Gabe Copley, Nate Hieronimus

Paving Contractor: Tri State

- Ronny Lewis

Plumber: Elite Plumbing

- Not Present

OWNER: Kentucky American Water Co.

- Chase Campbell, DJ Dotson, Tanner Goff, Jennifer Goins, Matthew Graff, Erik Hall,

- Contractor will follow all KAWC safety standards and practices. Contractor will work ethically and respectfully while representing KAWC in the field.
- Contractor will perform work as planned per engineering spec and KAWC standards
- DJ will acquire street cut permits from LFUCG and share with contractor
- Contractor will obtain all other necessary permits and safety devices as required per LFUCG Standards
- Project will begin once permitting is complete, and everyone agrees to schedule in order to meet project deadlines. Est. Start date of August 18, 2025

➤ **Established Project Deadlines:**

Project Name	WBS #	In-Service Date	Substantial Completion	Final Completion
S. Upper St.	R12-02B2.25-P-0013	November 17, 2025	December 19, 2025	January 19, 2026

- **Supervisor** – Alvin Newsom
- **Competent Person** – Gabe Copley
- DJ will oversee the pressurizing, sanitizing, and draining of main. DJ will obtain samples
- DJ will get one pagers to contractor to begin the communication with our customers.
- Tri State to perform final restorations in accordance with LFUCG and Historical Standards
- Elite Plumbing will perform any plumbing work throughout the entirety of this project

- Notification of second one pager to be delivered at the end of the project when Little Creek hands off to Tri-State. This is to be done by Stateline. KAWC will provide one pagers and others materials per usual.
- Open Discussion: Matthew Graff reviewed the project drawings with all parties. DJ Noted that no work can be done during move-in week for University of Kentucky (Aug 17-20). Jennifer reminded that this contract has not been entered into the system due to our switchover of contract systems. She will be in touch with DJ once contract is entered/approved. Tanner mentioned this project in a meeting with Uk and got zero pushback. Safety and traffic control will be of the utmost importance on this project. Permitting and timing will depend on Dani Wood.
- If an extension is necessary, the request must be made to Erik Hall and/or the inspector in a timely manner along with reasoning that explains the need for an extension. Extensions will be in letter form and will be at the discretion of KAWC to approve or deny. Extensions shall be requested no later than 2 weeks prior to established deadlines.
- **Change Orders** – KAW will provide appropriate materials and change order dollars for field changes (if deemed necessary by KAWC, approved by KAWC inspector and agreeable by both parties).
