TARIFF FORMAT

- A. Page Numbering - Page numbers appear in the upper right corner of the page. Pages are numbered sequentially. However, new pages are occasionally added to the tariff. When a new page is added between pages already in effect, a decimal is added. For example, a new page added between pages 14 and 15 would be 14.1.
- B. Page Revision Numbers - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current page version on file with the Kentucky P.S.C. For example, 4th Revised Page 14 cancels the 3rd Revised Page 14. Because of various suspension periods, deferrals, etc. the Kentucky P.S.C. follows in its tariff approval process, the most current page number on file with the Kentucky P.S.C. is not always the tariff page in effect. Consult the Check Sheet for the page currently in effect.
- C. Paragraph Numbering Sequence - There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level:
- 2.
  - 2.1.
  - 2.1.1.
  - 2.1.1.A.
  - 2.1.1.A.1.
  - 2.1.1.A.1.(a).
  - 2.1.1.A.1.(a).I.
  - 2.1.1.A.1.(a).I.(i).
  - 2.1.1.A.1.(a).I.(i).(l).
- D. Check Sheets - When a tariff filing is made with the Kentucky P.S.C., an updated check sheet accompanies the tariff filing. The check sheet lists the pages contained in the tariff, with a cross reference to the current revision number. When new pages are added, the check sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (\*). There will be no other symbols used on this page if these are the only changes made to it (i.e., the format, etc., remains the same, just revised revision levels on some pages). The tariff user should refer to the latest check sheet to find out if a particular page is the most current on file with the Kentucky P.S.C.

SECTION 2 - RULES AND REGULATIONS (Cont'd)

2.11 Refunds or Credits for Service Outages or Interruptions

- 2.11.1 An interruption period begins when the Customer reports a service, facility or circuit to be inoperative and, if necessary, releases it for testing and repair. An interruption period ends when the service, facility or circuit is operative. Credits for service outages or interruptions are subject to the regulations listed below.
- 2.11.2 If the Customer reports a service, facility or circuit to be interrupted but declines to release it for testing and repair, or refuses access to its premises for test and repair by the Company, the service, facility or circuit is considered to be impaired but not interrupted. It shall be the obligation of the Customer to notify Company immediately of any interruption in service for which a credit allowance is desired by Customer. SECTION 3 - EXPLANATION OF RATES

The regulations set forth in this section explain how to apply the rate tables associated with the various service offerings described in Section 4, following.

3.1 Timing of Calls

Billing for calls placed over the Carrier network is based in part on the duration of the call. There shall only be timing for conversation time and there shall be no charge for uncompleted calls. Conversation time is defined as the elapsed time when two-way communication between the calling and called party is possible. The call ends when either the calling or called party hangs up. Timing begins when the called station is answered, as determined by standard industry methods generally in use for ascertaining answer, including hardware answer supervision in which the local telephone company sends a signal to the switch.

3.2 Calculation of Distance

Where mileage bands appear in a rate table, rates for all calls are based upon the airline distance between the originating and terminating points of the call, as determined by the vertical and horizontal coordinates associated with the exchange (the area code and three digit central office code) associated with the originating and terminating telephone numbers. If the Customer obtains access to the Company's network by a dedicated access circuit, that circuit will be assigned an exchange for rating purposes based upon the Customer's main telephone number at the location where the dedicated access circuit terminates.

SECTION 4 - DESCRIPTION OF SERVICES (Cont'd)

4.2 OPERATOR DIALED SERVICE (Cont'd)

11. Determination of Rate Airline Miles

- a. MTS rates between points (cities, towns, or localities) are based on the airline distance between rate centers. In general, each point is designated as a rate center; certain small towns or localities are assigned adjacent rate centers with which they are closely associated for communication purposes or by community of interest.
- b. For the purpose of determining rate distances, a vertical V and horizontal H coordinate system is used. The V&H system consists of a series of coordinates which represents a theoretical grid of vertical and horizontal lines covering the State of Kentucky. The spacing between these lines is about 1,670 feet, and an intersection of any two grid lines represents the center of an area approximately 1/10 of a square mile designated by two coordinates.
- c. The location of a rate center expressed in latitude and longitude is converted mathematically to its grid location, that is, V and H coordinates (vertical and horizontal). These coordinates permit calculation of the distance between any two such rate centers.

SECTION 4 - DESCRIPTION OF SERVICES (Cont'd)

4.2 OPERATOR DIALED SERVICE (Cont'd)

12. Determination of Rate Airline Miles (Cont'd)

- d. To determine the rate distance between any two rate centers, compute airline mileage distances for use with Message Toll Telephone service (Long Distance MTS) in accordance with the following steps.
  - i. Obtain the V and H coordinates for each rate center.
  - ii. Obtain the difference between the V coordinates of the two rate centers. Obtain the difference between the H coordinates. The difference is always obtained by subtracting the smaller coordinate from the larger coordinate.
  - iii. Divide each of the differences obtained by three, rounding each quotient to the nearer integer.
  - iv. Square the two integers obtained and add the two squares. If the sum of the squares is greater than 1777, divide the integers obtained by three and repeat Step 4. Repeat until the sum of the squares is less than 1778.

4.2 OPERATOR DIALED SERVICE (Cont'd)

12. Determination of Rate Airline Miles- (Cont'd)

- v. The number of successive divisions by three in Steps 3 and 4 determine the value of N. Multiply the final sum of the two squares obtained in Step 4 by the multiplier specified for this value of N. Where N is 1, multiplier is 0.9, N is 2, multiplier is 8.1, N is 3, multiplier is 72.9, N is 4, multiplier is 656.1, N is 5, multiplier is 5904.9 and N is 6, multiplier is 53144.1.
- vi. Obtain the square root of product in Step 5 and with any resulting fraction, round up to next higher integer This is the message rate mileage except that when the mileage so obtained is less than the minimum rate mileage shown in Step 5, the minimum rate mileage corresponding to the N value is applicable. The minimum rate mileage for N is applicable for N of 2 through 6 and is 41, 121, 361, 1081 and 3241 respectively.

13. Determination of Rate Airline Miles--An alphabetical list of each exchange in the State of Kentucky with its corresponding V and H coordinates is included in National Exchange Company Association, Inc., Tariff FCC No. 4, and is incorporated herein by reference.
