**TARIFF FORMAT**

- A. Page numbering** - Page numbers appear in the upper right corner of the page. Pages are numbered sequentially. However, new pages are occasionally added to the Tariff. When a new page is added between pages already in effect, a decimal is added. For example, a new page added between pages 14 and 15 would be 14.1.
- B. Page Revision Numbers** - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current page version on file with the Commission. For example, the 4th revised Page 14 cancels the 3rd revised Page 14. Because of various suspension periods, deferrals, etc. the Department follows in their tariff approval process, the most current page number on file with the Department is not always the Tariff page in effect.
- C. Paragraph Numbering Sequence** - There are various levels of alphanumeric coding. Each level of coding is subservient to its next higher level. The following is an example of the numbering sequence suggested for use in tariffs.
- 2.1.
  - 2.1.1.
  - 2.1.1.A.
  - 2.1.1.A.1
  - 2.1.1.A.1.(a)
  - 2.1.1.A.1.(a).1
  - 2.1.1.A.1.(a).1.(i)
  - 2.1.1.A.1.(a).1.(i)(1)
- D. Check Sheet** - When a tariff filing is made with the Commission, an undated check sheet accompanies the tariff filing. The check sheet lists the sheets contained in the tariff, with a cross reference to the current revision number. When new pages are added, the check sheet is updated to reflect the revision. All revisions made in a given filing are designated by an asterisk (\*). There will be no other symbols used on the check sheet if these are the only changes made to it (i.e., the format, etc. remains the same, just revised revision levels on some pages). The tariff user should refer to the latest check sheet to find out if a particular page is the most current on file with the Commission.

5.9.1 Feature Descriptions

**Anonymous Call Rejection:** Permits the end -user to automatically reject incoming calls when the call originates from a telephone number which has blocked delivery of its calling number (see Calling Number Delivery Blocking). When active, calls from private numbers will be routed to a special announcement then terminated. The feature may be turned on or off by the end-user by dialing the appropriate feature control code. Anonymous Call Rejection is offered as a stand-alone feature or as an add-on to Caller ID Deluxe. (D,T,N)

**Call Block:** Allows the end-user to automatically block incoming calls from up to six end-user pre-selected telephone numbers programmed into the feature's screening list. Callers whose numbers have been blocked will hear a recorded message stating that their call has been blocked. The end-user controls when the feature is active, and can add or remove calling numbers from the feature's screening list.

**Call Forwarding Busy:** Permits the forwarding of incoming calls when the end-user's line is busy. The forwarded number is fixed by the end-user service order.

**Call Forwarding No Answer** - Permits the forwarding of incoming calls when the end-user's line remains unanswered after a pre-designated ringing interval. The ringing interval before forwarding and the forward-to number are fixed by the service order.

**Call Forwarding Variable** - Permits the end-user to automatically forward (transfer) all incoming calls to another telephone number, and to restore it to normal operation at their discretion. The end-user must dial an activation code from his/her exchange line along with the forward-to number in order to turn the feature on. A separate code is dialed by the end-user to deactivate the feature.

**Call Return:** allows the Customer to return a call to the last incoming call whether answered or not. Upon activation, it will re-dial the number automatically and continue to check the number every 45 seconds for up to 30 minutes if the number is busy. The Customer is alerted with a distinctive ringing pattern when the busy number is free. When the Customer answers the ring, the call is then completed. The calling party's number will not be delivered or announced to the call recipient under any circumstances.

5.9.1 Feature Descriptions, (Cont'd.)

**Caller ID Deluxe:** Permits the end-user to view a Directory Name and Directory Number of the calling party on incoming telephone calls. Information is displayed on a specialized CPE not provided by the Company. The feature also provides the date and time of each incoming call. It is the responsibility of the Customer to provide the necessary CPE. In some situations, the calling party's city and state may be displayed rather than a Directory Name, depending on available call data.

(D,T,N)

Caller ID Deluxe also includes Anonymous Call Rejection (ACR) where facilities are available. ACR can be activated and deactivated at the customer's discretion through the use of a preassigned feature access.

**Calling Number Delivery Block:** Prevents the delivery, display and announcement of the end-user's Directory Number and Directory Name on all calls dialed from an exchange service equipped with this option. The end user may have up to two additional numbers assigned to a single line (i.e. Distinctive Ring - First Number and Distinctive Ring - Second Number). The designated primary number will receive a normal ringing pattern, other numbers will receive distinctive ringing patterns. The pattern is based on the telephone number that the calling party dials.

**Hunting:** Routes a call to an idle station line in a prearranged group when the called station line is busy.

**Speed Calling:** Permits the Customer to place calls to other telephone numbers by dialing a one or two digit code rather than the complete telephone number. The feature is available as either an eight (8) code list or a thirty (30) code list. Code lists may include local and/or toll telephone numbers. The Customer has the ability to add or remove telephone numbers and codes to/from the speed calling list without assistance from the Company.

**Talking Call Waiting** - An enhancement to Call Waiting – Basic that provides an audible announcement of the incoming caller’s name following the regular call waiting tone.

**Three Way Calling:** Permits the end-user to add a third party to an established connection. When the third party answers, a two-way conversation can be held before adding the original party for a three-way conference. The end-user initiating the conference controls the call and may disconnect the third party to reestablish the original connection or establish a connection to a different third party. The feature may be used on both outgoing and incoming.

**SECTION 10 - MISCELLANEOUS SERVICES**

**10.1 Carrier Presubscription**

**10.1.1 General**

Carrier Presubscription is a procedure whereby a Customer designates to the Company the carrier which the Customer wishes to be the carrier of choice for intraLATA and interLATA toll calls. Such calls are automatically directed to the designated carrier, without the need to use carrier access codes or additional dialing to direct the call to the designated carrier. Presubscription does not prevent a Customer who has presubscribed to an IntraLATA or InterLATA toll carrier from using carrier access codes or additional dialing to direct calls to an alternative long distance carrier on a per call basis.

**10.1.2 Presubscription Options** - Customers may select the same carrier or separate carriers for intraLATA and interLATA long distance. The following options for long distance Presubscription are available:

- Option A:** Customer select the Company as the presubscribed carrier for IntraLATA and InterLATA toll calls subject to presubscription.
- Option B:** Customer may select the Company as the presubscribed carrier for IntraLATA calls subject to presubscription and some other carrier as the presubscribed carrier for interLATA toll calls subject to presubscription.
- Option C:** Customer may select a carrier other than the Company for intraLATA toll calls subject to presubscription and the Company for interLATA toll calls subject to presubscription.
- Option D:** Customer may select the carrier other than the Company for both intraLATA and interLATA toll calls subject to presubscription
- Option E:** Customer may select two different carriers, neither being the Company for intraLATA and interLATA toll calls. One carrier to be the Customers' primary intraLATA interexchange carrier. The other carrier to be the Customer's primary interLATA interexchange carrier.
- Option F:** Customer may select a carrier other than the Company for no presubscribed carrier for intraLATA toll calls subject to presubscription which will require the Customer to dial a carrier access code to route all IntraLATA toll calls to the carrier of choice for each call.

**SECTION 11 - ADVANCED TELECOMMUNICATIONS/DATA SERVICES****11.1 Integrated Services Digital Network (ISDN) Offerings****11.1.1 Primary Rate Interface (PRI)**

Integrated Services Digital Network (ISDN) is a set of transmission protocols that provides end-to-end digital connectivity and integration of voice, data and video, on a single Customer loop to support a wide variety of services via the public switched network. The Primary Rate Interface (PRI) consists of a 23B+D configuration with 23 64Kbps Bearer (B) digital channels and 1 64Kbps Data (D) digital channel. The B channels are designed for voice, data, image and sound transmissions. B channels can support synchronous, asynchronous or isochronous services at rates up to 64Kbps. B channels can be aggregated for higher bandwidth applications. The D channel PRI provides the out of band signaling, call control and messaging.

PRI is provided through standard four wire DS-1 (1.544Mbps) point to point, private line facilities that enables Customer control of the 24 individual channels. PRI supports 1+, 0+, 7 digit, and 10 digit Local, IntraLATA and InterLATA services, as well as 01+ and 011+ international calling. PRI allows Customers to direct voice, data and video over the Switched Network. Channels may be pre-subscribed to an IXC carrier of the Customer's choice or used with 10XXX casual dialing. PRI also allows access to network services, such as Two-Way, Incoming Only, Outgoing Only and DID.

Multiple PRI interfaces can be combined to function as one group. Utilizing a Backup D Channel arrangement, Customers are able to link up to 20 DS-1s together, providing a maximum of 479 64Kbps B channels controlled by a single D (signaling) channel.

ISDN is available for a minimum term of one year.

DID service requires special PBX software and hardware not provided by the Company. Such hardware and software is the responsibility of the Customer.

The following charges apply to Customers subscribing to DID service provided by the Company. These charges are in addition to recurring and nonrecurring charges for PBX Trunks as shown in Section 6.5 of this tariff.
