3.3 Calculation of Distance

Usage charges for all mileage sensitive products are based on the airline distance between the rate centers associated with the originating and terminating points of the call. The rate centers or serving central office of a call are determined by the NPAs (or Area Codes) and exchanges (NXXs) of the originating and terminating points.

The distance between the originating and terminating points is calculated by using the "V" and "H" coordinates of the rate center or serving AT&T central office as defined and listed in AT&T FCC Tariff No. 10 and AT&T P.S.C. Ky. Tariff No. 4 and on file with the Kentucky PSC in the following manner:

Step 1 - Obtain the "V" and "H" coordinates of the originating and the destination points as filed with the Kentucky PSC.

Step 2 - Obtain the difference between the "V" coordinates. Obtain the difference between the "H" coordinates.

Step 3 - Square the differences obtained in Step 2.

Step 4 - Add the squares of the "V" difference and "H" difference obtained in Step 3.

Step 5 - Divide the sum of the square obtained in Step 4 by ten (10). Round to the next higher whole number if any fraction results from the division.

Step 6 - Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number if any fraction is obtained. This is the V&H mileage distance between the originating and terminating points of the call.

Formula:

$$\sqrt{\frac{(V_1 - V_2)^2 + (H_1 - H_2)^2}{10}}$$
