TARIFF FORMAT SHEETS

- A. Sheet Numbering - Sheet numbers appear in the upper right corner of the sheet. Sheets are numbered sequential. However, new sheets are occasionally added to the tariff. When a new sheet is added between sheets already in effect, a decimal is added. For example, a new sheet added between sheets 14 and 15 would be 14.1.
- B. Sheet Revision Numbers - Revision numbers also appear in the upper right corner of each sheet. These numbers are used to determine the most current sheet version on file with the Kentucky Public Service Commission ("KPSC"). For example, the 4th revised Sheet 14 cancels the 3rd revised Sheet 14. Because of various suspension periods, deferrals, etc. the KPSC follows in their tariff approval process, the most current sheet number on file with the KPSC is not always the tariff sheet in effect. Consult the Check Sheet for the sheet currently in effect.
- C. Paragraph Numbering Sequence - There are four levels of paragraph coding. Each level of coding is subservient to its next higher level.
 - 2.
 - 2.1.
 - 2.1.A.
 - 2.1.A.(i).
- D. Check Sheets - When a tariff filing is made with the KPSC, an updated check sheet accompanies the tariff filing. The check sheet lists the sheets contained in the tariff, with a cross reference to the current revision number. When new sheets are added, the check sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (*). There will be no other symbols used on this sheet if these are the only changes made to it (i.e., the format, etc. remains the same, just revised revision levels on some sheets). The tariff user should refer to the latest check sheet to find out if a particular sheet is the most current on file with the KPSC.

SECTION 3 - DESCRIPTION OF SERVICES

3.1 Timing of Calls

Long distance usage charges are based on the actual usage of the Company's network. The Company will determine that a call has been established by signal from the local telephone company. The time at which the called party completes the circuit is determined by hardware answer supervision in which the local telephone company sends a signal to the switch or software utilizing audio tone detection. A call is terminated when the calling or called party ends the circuit.

Minimum billed call duration and billing increments differ from product to product. Product specific information is included in the Rate Schedules.

The aggregate usage for each completed call is measured and rounded to the next higher billing increment for billing purposes.

There is no billing applied for incomplete calls.

3.2 Computation of Charges

Usage charges for service will be based on the total duration of the call and applicable monthly charges.

3.3 Start of Service for Billing Purposes

For billing purposes, the start of service is the day following acceptance by the customer of the Company's service or equipment. The end of service date is the last day of the minimum notification of cancellation or any portion of the last day, after receipt by the Company of notification of cancellation as described in Section 2 of this tariff.
