TARIFF FORMAT

- A. Sheet Numbering - Sheet numbers appear in the upper right corner of the page. Sheets are numbered sequentially. However, new sheets are occasionally added to the tariff. When a new sheet is added between sheets already in effect, a decimal is added. For example, a new sheet added between sheets 14 and 15 would be 14.1.
- B. Sheet Revision Numbers - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current sheet version on file with the Commonwealth of Kentucky. For example, the 4th. revised Sheet 14 cancels the 3rd revised Sheet 14. The most current sheet number on file with the Commission is always the tariff page in effect. Consult the Check Sheet for the Sheet currently in effect.
- C. Paragraph Numbering Sequence - There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level:

2.  
2.1.  
2.1.1.  
2.1.1.A.  
2.1.1.A.1.

TARIFF FORMAT (Continued)

- D. Check Sheets -- When a tariff filing is made in the State, an updated check sheet accompanies the tariff filing. The check sheet lists the sheets contained in the tariff, with a cross reference to the current revision number. When new pages are added, the check sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (\*). There will be no other symbols used on this page if these are the only changes made to it (i.e., the format, etc. remains the same, just revised revision levels on some pages). The tariff user should refer to the latest check sheet to find out if a particular sheet is the most current on file with the Commonwealth of Kentucky.

SECTION 3 - DESCRIPTION OF SERVICE

3.1 Timing of Calls

3.1.1 The Customer's long distance usage charge is based on the actual usage of Telenational Communications Limited Partnership's service.

3.1.2 Usage measurement begins when the called party picks up the receiver. Determining when the called party picks up the receiver, is accomplished by one of the following methods:

A. Hardware Answer Supervision

When hardware answer supervision is provided by the local telephone company serving the called party, no measurement occurs, unless the local telephone company sends a signal to the switch of the company that the called party has answered.

3.1.2 B. Software Answer Supervision

When software supervision is employed, the Company cannot accurately determine when the called party has answered, and audio tone detection is used. In these instances, up to 66 seconds of ringing will be allowed before usage measurement begins.

3.1.3 A call is terminated when the calling party hangs up.

A Customer can expect a call completion rate (number of calls completed/number of calls attempted) of not less than 99%, during peak use periods, for all FG D services (i.e., "1+" dialing).

3.3 Calculation of Distance

Usage charges for all mileage sensitive products are based on the airline distance between rate centers associated with the originating and terminating points of the call.

The airline mileage between rate centers is determined by applying the formula below to the vertical and horizontal coordinates associated with the rate centers involved. The company uses the rate centers and associated vertical and horizontal coordinates that are produced by Bell Communications Research in their NPA-NXX V & H Coordinates Tape and contained in AT&T Tariff No. 10.
