underground facilities and that of providing overhead facilities. The payment to be made by the applicant shall be determined from total footage of single phase primary, secondary and service conductor to be installed at an average per foot cost differential in accordance with the 1989 Average Cost Differential filed herewith (T) as Exhibit "A", which 1989 Average Cost Differential (T) shall be updated annually. (Three wire secondary and service conductor runs shall be considered as one conductor, i.e. triplex). The average cost differential per foot, as stated, is representative of construction in soil free of rock, shale, or other impairments which increase cost of construction. Where rock, shale or other impairments are anticipated or encountered in construction, the actual increased cost of trenching and backfilling shall be borne by the applicant.

(f) The applicant may be required to deposit the entire estimated cost of the extension. If this is done, the amount deposited in excess of the normal charge for the underground extensions, as provided in paragraph "e" above, shall be refunded to the applicant over a ten (10) year period as provided by the Public Service Commission

(g) The applicant may be required to perform all necessary trenching and backfilling in accordance with the Cooperative's specifications. The Cooperative shall then credit the applicant's cost in an amount equal to the Cooperative's normal cost for trenching and backfilling.

The Cooperative shall furnish, install and maintain the service lateral to the Applicant's meter base (which normally will be at the corner of the building nearest the point to be served) except that the applicant shall furnish and install proper size conduit from the meter base to eighteen (18) inches below ground level.
