JACKSON COUNTY RURAL ELECTRIC
COOPERATIVE CORPORATION

RULES AND REGULATIONS

The Company will install underground distribution lines to a residential subdivision under the following conditions:

1. The subdivision being developed must consist of a tract of land which is divided into ten (10) or more lots for the construction of new residential buildings or the land on which is constructed two (2) or more new multiple occupancy buildings (refer to PSC Electric Rules, Appendix A for definitions of terms).
2. Developer or owner of subdivision shall be required to advance to the Company a non-refundable payment in an amount equal to an "estimated average cost differential," if any, between the average or representative cost of underground distribution systems in residential subdivisions and of equivalent overhead distribution systems within the utility service areas. If the applicant is required to deposit the entire estimated cost of the extension, the amount in excess of the normal charge for underground extensions shall be refunded to the applicant over a ten (10) year period as provided in Public Service Commission Rule Elec-1-X-3.
3. The Company will construct underground distribution facilities in the subdivision adequate to render single phase 120/240 volt service.
4. Three phase primary mains or feeders required within a subdivision to supply local distribution or to serve individual three phase loads may be overhead unless underground is required by governmental authorities or chosen by applicant, in either of which case the differential cost of underground shall be born by the applicant.
5. Developer or successor in title shall grant a right-of-way satisfactory to the Company for the installation, operation and maintenance of its underground facilities.
6. If developer provides and installs the secondary service lines to the residence from service pedestal located on easement, the Company shall give the applicant credit in computing the entire estimated cost of the extension for fifty dollars (\$50.00) or the equivalent cost of an overhead service line to the applicants meter base, whichever is greater and only the difference after giving such credit will be required as a deposit. Service lines to house (provided by developer) shall be installed and ready for inspection at the same time as the residence. Trench is to be left open until inspection has been made. If the Company provides secondary service lines, applicant shall pay the "estimated average cost differential" between overhead and underground service.

RULES AND REGULATIONS

- 7. For all developments that do not meet the conditions set forth in paragraph 1 above, underground distribution will be installed provided an advance to the Company is made in an amount equal to the difference between the Company's estimated cost of underground facilities and overhead facilities, which it would otherwise provide.
- 8. The requirements as to wiring specifications of the utility and those of any regulatory body having jurisdiction must be followed. The Utility's Rates, Rules, and Regulations for furnishing electric service apply in the case of underground service and overhead service alike.
- 9. Estimated cost differential per foot of conductor for residential service; \$2.00 plus extra cost when rock or other impairment encountered.

Estimated cost differential per foot of conductor for primary service (if applicable): \$2.00 plus extra cost when rock or other impairment encountered.

Credit allowed as follows:

For trenching and backfilling by applicant, per foot	\$.75
For conduit furnished by applicant, required by Company, per foot	.25

Cost Differential Computation

Actual Experience: 907 feet underground per foot	\$ 2.39
Overhead- same work orders - at standard cost rates	<u>\$.56</u>
Differential per foot	<u>\$ 1.83</u>

VS 2.00?

Due to our limited experience with underground which is insufficient to give an accurate comparison, we obtained figures from other utilities and have decided upon an estimated cost differential of \$2.00 per foot until more accurate figures can be developed.
