TARIFF FORMAT

- A. **Sheet Numbering** - Page numbers appear in the upper right corner of the sheet. Pages are numbered sequentially. However, new pages are occasionally added to the tariff. When a new page is added between existing pages with whole numbers, a decimal is added. For example, a new page added between pages 34 and 35 would be page 34.1.
- B. **Sheet Revision Numbering** - Revision numbers also appear in the upper right corner of the page. These numbers are used to determine the most current page version on file with the Commission. For example, 4th Revised Page 34 cancels the 3rd Revised Page 34. Consult the check sheet for the page currently in effect.
- C. **Paragraph Numbering Sequence** - There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level:
- 2.
 - 2.1.
 - 2.1.1.
 - 2.1.1.A.
 - 2.1.1.A.1.
 - 2.1.1.A.1.(a).
 - 2.1.1.A.1.(a).I.
 - 2.1.1.A.1.(a).I.(i).
 - 2.1.1.A.1.(a).I.(i).(1).
- D. **Check Sheet** - When a tariff is filed with the Commission, an updated check sheet accompanies the tariff filing. The check sheet lists the tariff pages, with a cross-reference to the current revision number. When new sheets are added, the check sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (*). There will be no other symbols used on this sheet if these are the only changes made. The tariff user should refer to the latest check sheet to find out if a particular page is the most current on file with the Commission.

2.5. Allowances for Interruptions in Service (Cont'd)

2.5.3. Limitations on Allowances (Cont'd)

- 2.5.3.A.4. during any period in which the Company is not given full and free access to the its facilities and equipment for the purpose of investigating and correcting the interruption;
- 2.5.3.A.5. during any period in which the Carrier Customer continues to use the service on an impaired basis;
- 2.5.3.A.6. during any period in which the Carrier Customer has released service to the Company for maintenance purposes or for implementation of a Carrier Customer order for a change in service arrangements; and
- 2.5.3.A.7. that was not reported to the Company within thirty (30) days of the date that service was affected.

2.6. Applications for Service

The Company will accept both affirmative orders and constructive orders for Carrier-Customer access services. The Company does not require a written service order for the initiation of switched access services to Carrier-Customers.

2.6.1. Service Orders

The signing of a Service Order by the Carrier Customer and acceptance by the Company initiates the respective obligations of the parties as set forth therein and pursuant to this tariff, but the duration of the service is calculated from the Service Commencement Date. Should a Carrier Customer use the Company's access service without an executed Service Order, the Company may, at its option, request that the Carrier-Customer submit a Service Order. The Company may accept the Service Order either by submitting Billing Name and Address ("BNA") information to the Carrier Customer at the request of the Carrier Customer or by the Carrier Customer accepting PIC requests by End-User-Customers that request the Carrier Customer as their PIC.

2.6. Applications for Service (Cont'd)

2.6.2. Affirmative Service Order

A Carrier-Customer may affirmatively request the Company's switched access services either by placing a written request for the Company's service, by sending traffic to and/or accepting traffic from Company End-User-Customers and then submitting BNA requests to the Company, or by allowing Company End-User-Customers to choose the Carrier-Customer as their PIC and once processed, allowing Company End-User-Customers to utilize the Carrier-Customer as their primary IXC.

2.6.3. Constructive Service Order

Alternatively, a Carrier Customer may constructively order the Company's services if it, without any explicit written request for service from the Company, avails itself of the Company's local exchange network. If a Carrier Customer solicits Company End-User-Customers and Company End-User-Customers choose to access the Carrier Customer's network through the Company's local exchange network, the Carrier-Customer has constructively ordered Company's originating and/or terminating switched access services.

2.7. Installation of Service

2.9. Blocking of Access Traffic

When a Carrier Customer terminates its access arrangements with the Company, it is mandatory that the Carrier Customer ensures that all End-User traffic – both originating and terminating – between the Carrier Customer and the Company is blocked. The Carrier Customer shall have the option of blocking the traffic itself, or arranging for the Company to block the traffic and paying all charges and related costs to compensate the Company for blocking the traffic. Where the Carrier Customer elects to block the access traffic itself, the Carrier Customer will have full responsibility to compensate the Company, at the Company's then-currently tariff rates, for any End User traffic allowed to pass along the discontinued access service route.

Where a Carrier Customer terminates its access arrangements with the Company, and the End User is a Shared Customer, the Carrier Customer also must adhere to the following requirements:

2.9.1. Script Recordings

The Carrier Customer must record a script to inform the Shared Customer that its interexchange service has been blocked at the request of the Carrier Customer. All recorded scripts must be submitted to the Company for prior approval. The script recording must contain the following information:

- 2.9.1.A. Clearly state that the Shared Customer's access to its preferred intraLATA toll carrier has been blocked at the request of the Carrier Customer and not at the request of the Company;
- 2.9.1.B. Clearly state that, as a result of the Carrier Customer's blocking of the Shared Customer's traffic, the Company is compelled to place the Shared Customer in a "NO-PIC" status until such time as the Shared Customer or a submitting carrier informs the Company of the previously-Shared Customer's new PIC for intrastate toll service. The Carrier Customer must explain that until the Shared Customer selects a new intraLATA toll PIC, the Shared Customer must dial an access code in order to reach an IXC for all of its intraLATA long distance calls. The Carrier Customer also must state that it will be responsible for any PIC change charge assessed on the End-User Customer by the Company or another Carrier as a result of the Carrier Customer's blocking of the Shared Customer's traffic.

SECTION 3 - SPECIAL ARRANGEMENTS

3.1. Individual Case Basis Arrangements

ICB Arrangements are those which are not offered under other sections of this tariff. ICB Arrangements will be developed on a case-by-case basis in response to bona fide requests from Carrier Customers or prospective Carrier Customers. The facilities utilized to provide these services are of a type normally used by the Company in furnishing its other services to Carrier Customers, and shall be comparable with other access services offered by the Company, as well as the standard engineering and maintenance practices of the Company. The requested service or arrangement is subject to the availability of the necessary Company personnel and capital resources.

SECTION 4 - DESCRIPTION OF SERVICE

4.1. Timing of Calls

- 4.1.1. The Carrier Customer's monthly usage charges for the Company's switched access service are based upon the total number of minutes the Carrier Customer uses.
- 4.1.2. Carrier Customer traffic to the Company's end offices will be measured (*i.e.* recorded or assumed) by the Company at end office switches or access tandem switches. Originating and terminating Calls will be measured (*i.e.* recorded or assumed) by the Company to determine the basis for computing chargeable access minutes. In the event that End-User Customer message detail is unavailable because the Company has lost or damaged tapes or experienced recording system outages, the Company will estimate the volume of lost Carrier Customer access minutes of use based upon previously-known values.
- 4.1.3. For originating Calls over Feature Group D ("FGD"), usage measurement/chargeable time begins when the originating FGD switch receives the first wink supervisory signal forwarded from the Customer's point of origination. The measurement of originating Call usage ends when the originating FGD switch receives disconnect supervision from either the originating End-User's end office, indicating the originating End-User has disconnected, or the Carrier Customer's point of termination, whichever is first recognized by the switch.
- 4.1.4. For terminating Calls over FGD, the measurement of access minutes begins when the terminating FGD switch receives answer supervision from the terminating End User's end office, indicating that the terminating End User has answered. For terminating Calls over FGD, the measured minutes are chargeable access minutes. Where assumed minutes are used, the assumed minutes are the chargeable access minutes. The measurement of terminating Call usage over FGD ends when the terminating FGD switch receives disconnect supervision from either the terminating End-User's end office, indicating the terminating End-User has disconnected, or the Customer's point of termination, whichever is recognized first by the switch.
- 4.1.5. For billing purposes, FGD access minutes or fractions thereof (the exact value of the fraction being a function of the switch technology where the measurement is made), are accumulated over the billing period for each end office and then are rounded up to the nearest access minute for each end office and billed in increments of one (1) minute.
